/11 cont./

682 killed under the obligation of killing either the murderer or one of the latter's relatives. A blood-feud passes from generation to generation and is a person's sacred duty; unavenged blood is considered a shame and a disgrace for the living relatives of the person killed. The Abkhaz believe that if for some reason or other blood remains unavenged, it will avenge itself.

In case the killer himself managed to escape, a relative [628] of his was held responsible; he was killed, captured, or robbed and finally ruined. Even the killing of the meanest slave often led to clashes involving whole villages; if a mutual understanding and peace were not restored among them, the result of such a feud would be that one of the villages had to face ruin or move away to another place.

682 In blood-feuds the descent of the persons involved played 565 an important role. If, for instance, a prince killed a peasant, the relatives of the latter had no right to avenge the blood of the killed upon the killer, for "the blood of a peasant is not equal to that of a prince." Therefore, instead of the prince himself, [608] it was his foster father who had to pay for the blood shed by the prince.

There were different settlements for the blood of a peasant, a nobleman, or a prince.

Although the personal qualities of a man commanded /12/ special attention in Abkhazia the blood of a peasant was nevertheless valued lower than the blood of a nobleman, and that of the latter lower than the blood of a prince. For instance, if the blood of a peasant was valued at five human souls, then the blood of a nobleman was worth three times more, and that of a prince five times more than the blood of a peasant. The price [435] of a life was determined in terms of spans /pyad'/. A soul (person) four spans tall was valued at 30 cows or 30 rubles in silver; one of five spans, 50 cows or 50 silver rubles; and one of six spans, 70 cows or 70 rubles in silver. Arms and clothing were added as supplementary payment. Blood was paid off with cows, goats, sheep, and beehives. The number of the latter was determined on the basis of the value of a cow.
